Account Control Workout Student Instructions

Introduction

This workout introduces you to the idea of adding users to a group. Groups are very useful in file management as they allow you to group users who all need the same permissions to an object such as account permissions or access to a file. In this workout you will add five users to a group and then assign the group access to a folder.

Logging on to Your Computer

- Log into the Guacamole web server using *cybergym* and *Let's workout!* as the username and password.
- You may have to refresh the page if a screen does not come up.
- Then, you will log in automatically.

Your Mission

1. Add the following users to the group labeled **Workout Users**:
     a. Joeschmoe
     b. Johndeer
     c. Hansdown
     d. Guymann
     e. Indigoviolet
2. On your desktop you should see a folder called Account_Control. Your goal is to add the **Workout Users** group to the file's permissions.
