Password Policy Student Workout Instructions

Introduction:

For this workout, you will learn how to change the password policy on a Windows machine. The password policy is used by system administrators in order to set password parameters that users on a network must follow when creating their password.

Logging on to Your Computer:

- Log into the Guacamole web server using the credentials provided.
- You may have to refresh the page if a screen does not come up.
- Then, you will log in automatically.

Mission

You are working for a company and they have asked you to change some of the password parameters. They are requesting you turn password complexity on, set the minimum number of character to 12, and set max password age to 365 days.

If you have complete the workout and will not show completion go to the start menu and open up command prompt. When the window pops up enter the command **gpupdate /force**. This will force update the group policy.
